

## PROJECT 5

# We Are Zoologists

### **Goal**

Children observe how animal parents care for their young and how baby animals eat, communicate, move, and stay safe.

### **What**

In *We are Zoologists*, children compare the different ways that ducklings, kittens, and puppies thrive and learn from their animal parents.

### **Why**

Children's innate sense of caring helps them discover how different types of animals care for their babies.

### **Community**

Children discover how veterinarians and pet owners care for pets to keep them healthy and safe.

### **Family**

Family members move with their child like a duckling, kitten, and puppy and compare a human family to an animal family.
