

## PROJECT 6

# We Are Engineers

### **Goal**

Children intentionally plan, build, and rebuild structures with various materials while constructing a house for a “little pig.”

### **What**

*We are Engineers* includes real-world building activities that invite children to find solutions and plan new strategies.

### **Why**

As children hold, carry, and stack blocks during block play, they learn about the properties of weight, shape, and size.

### **Community**

Children gain an understanding of how engineers build the different structures around them.

### **Family**

Family members build structures with open-ended materials, visit a local hardware store, and draw the different parts of a building.
