Young children are natural builders. Their play often involves stacking blocks, drawing pictures of buildings they have seen or imagined, and role playing with pretend tools.

During We Are Builders, children investigate how buildings are designed and explore construction materials, tools, and simple machines. Then they design, plan, and build their own birdhouses.

Family members can volunteer to supervise children as they build; take part in a Gallery Walk at a classroom "building museum" to view children's building plans and birdhouses; support children's learning at home.

Volunteers from the community partner are invited to support children as they use real tools and build their own birdhouses.
